

Technical task #1

Frontend test automation

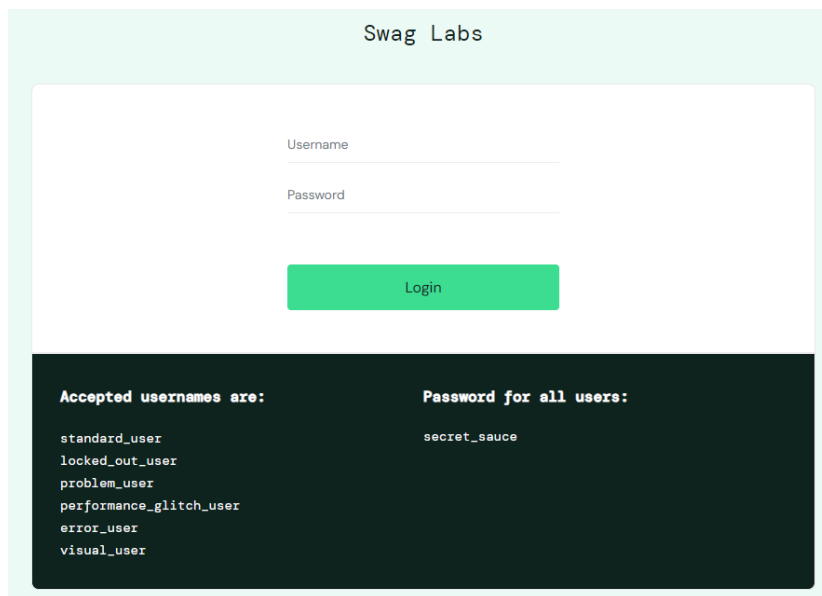

Instructions

- Design and implement 3-4 test cases to test the main functionality of the page below and automate it.
- In each test case, you should describe why you think this functionality is essential.
- Ensure that you can run your test from command line to demonstrate to the interview that tests work.
- Results should be published using Github and containing all required information to be able to run it locally.
- Tech stack: Use a framework of your choice (e.g. Selenium, Cypress...)
- Share your solution with us via email jobs@moxymind.eu

Test User Data - They can be found directly on the website.

System under test (SUT)

- <https://www.saucedemo.com/>

The screenshot shows the Swag Labs login page. At the top, it says "Swag Labs". Below that, there are two input fields: "Username" and "Password". A green "Login" button is positioned below the password field. At the bottom of the page, there is a dark green box containing two columns of text. The left column is titled "Accepted usernames are:" and lists: standard_user, locked_out_user, problem_user, performance_glitch_user, error_user, and visual_user. The right column is titled "Password for all users:" and lists: secret_sauce.

Accepted usernames are:	Password for all users:
standard_user	secret_sauce
locked_out_user	
problem_user	
performance_glitch_user	
error_user	
visual_user
