

Technical task #2

API test automation

Instructions

- Design and implement 2 key scenarios for REST API.
- Below, you will find test cases GET - List Users and Post - Create an user. Your objective is to showcase your automation skills by constructing valid requests, validating responses, and implementing essential testing practices.
- Ensure that you can run your test from command line to demonstrate to the interview that tests work.
- Results should be published using Github and containing all required information to be able to run it locally.
- Tech stack: Use a framework of your choice (e.g. Selenium, Cypress...)
- Share your solution with us via email jobs@moxymind.eu
-  Throughout the task, you may encounter tasks marked with this icon. These additional tasks are optional but completing them will be viewed as a positive contribution, although it is not mandatory.
- When faced with a challenging task, feel free to provide a partial solution if you're unsure.
- Good luck, we look forward to seeing your automated solutions!

System under test (SUT)

- <https://reqres.in/>

Test Case 1 – GET - List Users

- Send a proper Request.
 - Assert received data in Response:
 - o “total”
 - o “last_name” for the first and for the second User in “data”
 - Count number of received users in “data” and compare it to the received value “total”.
-
-  *Optional bonus task: Create assertions for possible data types present in the response.*

Request

/api/users?page=2

Response

200

```
{
  "page": 2,
  "per_page": 6,
  "total": 12,
  "total_pages": 2,
  "data": [
    {
      "id": 7,
      "email": "michael.lawson@reqres",
      "first_name": "Michael",
      "last_name": "Lawson",
      "avatar": "https://reqres.in/im
    },
    {
      "id": 8,
      "email": "lindsay.ferguson@reqr
      "first_name": "Lindsay"
```

Test Case 2 – POST – Create

- Send proper request.
- In received Response assert:
 - HTTP code
 - ID and timestamp of createdAt
- Make the test data driven. Use external source of data.
 - Assert whether Response time was less than a variable (e.g. limit = 100 ms)
-  *Optional bonus task: Create the assert to verify the response schema.*

Request

/api/users

```
{  
  "name": "morpheus",  
  "job": "leader"  
}
```

Response

201

```
{  
  "name": "morpheus",  
  "job": "leader",  
  "id": "601",  
  "createdAt": "2022-04-05T09:24:33.503Z"  
}
```
