

Technical task #3

Mobile test automation

Instructions

- Design and implement a simple test automation framework for mobile automation using any programming language for the System under test of your choice (can be any application, even built-in apps like Calculator, etc.)
- You can do it either for Android or iOS. Choice is up to you.
- Come up with 2 different test scenarios for testing SUT of your choice.
- Implement automated tests for those test scenarios
- Use appropriate design patterns.
- Ensure that your solution works fine with an emulator/simulator
- (OPTIONAL) Ensure that your solution works fine on real device
- Ensure that you can run your test from a command line.
- (OPTIONAL) add some reporting solution for your FWK
- Share your solution in a GitHub repository and send the link to jobs@moxymind.eu
